1990). The authors also found that the use of a single, unidimensional measure of self-esteem was insufficient to capture the complexity of the construct. They argued that self-esteem is a multidimensional construct that includes both global and specific components. The authors also found that the use of a single, unidimensional measure of self-esteem was insufficient to capture the complexity of the construct. They argued that self-esteem is a multidimensional construct that includes both global and specific components.
