

DETAILED GEOHAZARD MAP OF THE MUNICIPALITY OF NABAS, PROVINCE OF AKLAN, PHILIPPINES

Based on 1:10,000 scale Geohazard Map

LEGEND :

Landslide

- Very high landslide susceptibility**
Areas usually with steep to very steep slopes and underlain by weak materials. Recent landslides, occurrences and tension cracks are present. Human induced effects could be an aggravating factor.
- High landslide susceptibility**
Areas usually with steep to very steep slopes and underlain by weak materials. Areas with numerous old/inactive landslides.
- Moderate landslide susceptibility**
Areas with moderately steep slopes. Soil creep and other indications of possible landslide occurrence are present.
- Low landslide susceptibility**
Gently sloping areas with no identified landslide.
- Debris flow/ Possible accumulation zone**
Areas that could be affected by landslide debris.

Flooding

- Very high flood susceptibility**
Areas likely to experience flood heights of greater than 2 meters and/or flood duration of more than 3 days. These areas are immediately flooded during heavy rains of several hours. Include landforms of topographic lows such as active river channels, abandoned river channels and areas along river banks; also prone to flashfloods.
- High flood susceptibility**
Areas likely to experience flood heights of 1.0 to 2.0 meters and/or flood duration of more than 3 days. These areas are immediately flooded during heavy rains of several hours. Include landforms of topographic lows such as active river channels, abandoned river channels and areas along river banks; also prone to flashfloods.
- Moderate flood susceptibility**
Areas likely to experience flood heights between 0.5 and 1 meter and/or flood duration of 1 to 3 days. These areas are subject to widespread inundation during prolonged and extensive heavy rainfall or extreme weather condition. Fluvial terraces, alluvial fans, and infilled valleys are areas moderately subjected to flooding.
- Low flood susceptibility**
Areas likely to experience flood heights of 0.5 meter or less and/or flood duration of less than 1 day. These areas include low hills and gentle slopes. They also have sparse to moderate drainage density.

- Main Road
- Secondary Road
- Track/ trail
- River
- Municipal Boundary
- Barangay center location
- Purok/ Sitio location
- School
- Hospital
- Areas susceptible to ground subsidence/ sinkhole development
- Areas susceptible to rockfall
- Recent landslide deposit
- Old landslide deposit
- Active landslide
- Inactive landslide
- Landslide area with engineering measures
- Soil Creep
- Gully Development
