

PRELIMINARY DETAILED GEOHAZARD MAP OF THE MUNICIPALITY OF TAPAZ, PROVINCE OF CAPIZ, PHILIPPINES

Based on 1:10,000 scale Geohazard Map

LEGEND :

Landslide

- Very high landslide susceptibility**
Areas usually with steep to very steep slopes and underlain by weak materials. Recent landslides, escarpments and tension cracks are present. Human related effects could be an aggravating factor.
- High landslide susceptibility**
Areas usually with steep to very steep slopes and underlain by weak materials. Areas with numerous old inactive landslides.
- Moderate landslide susceptibility**
Areas with moderately steep slopes. Soil creep and other indications of possible landslide occurrence are present.
- Low landslide susceptibility**
Gently sloping areas with no identified landslide.
- Debris flow / Possible accumulation zone**
Areas that could be affected by landslide debris.

Flooding

- Very high flood susceptibility**
Areas likely to experience flood heights of greater than 2 meters and/or flood duration of more than 3 days. These areas are immediately flooded during heavy rains of several hours, include landforms of topographic lows such as active river channels, abandoned river channels and area along river banks, also prone to flashfloods.
- High flood susceptibility**
Areas likely to experience flood heights of 1.0 to 2.0 meters and/or flood duration of more than 3 days. These areas are immediately flooded during heavy rains of several hours, include landforms of topographic lows such as active river channels, abandoned river channels and area along river banks, also prone to flashfloods.
- Moderate flood susceptibility**
Areas likely to experience flood heights between 0.5 and 1 meter and/or flood duration of 1 to 3 days. These areas are subject to widespread inundation during prolonged and extensive heavy rainfall or extreme weather condition. Fluvial terraces, alluvial fans, and infilled valleys are areas moderately subjected to flooding.
- Low flood susceptibility**
Areas likely to experience flood heights of 0.5 meter or less and/or flood duration of less than 1 day. These areas include low hills and gentle slopes. They also have sparse to moderate drainage density.

- Main Road
- Secondary Road
- Track, trail
- River
- Municipal Boundary
- Barangay center location
- Punk/Site location
- School
- Hospital
- Areas susceptible to ground subsidence/sinkhole development
- Areas susceptible to rockfall
- Recent landslide deposit
- Old landslide deposit
- Active landslide
- Inactive landslide
- Landslide area with engineering measures
- Soil Creep
- Gully Development
